

## SHANTANU SHRIPAD MANE - GAMEPLAY ENGINEER

Phone No.: +1-385-202-9752 | Email: [shantanu.m934@gmail.com](mailto:shantanu.m934@gmail.com)  
Portfolio: [shantanumane.com](http://shantanumane.com) | [linkedin.com/in/shantanusmane](https://linkedin.com/in/shantanusmane)

### EDUCATION

**University of Utah, Salt Lake City, USA - May 2019**

Secured a Master of Entertainment Arts & Engineering - Game Engineering Track with GPA 3.88/4.00

**K.J. Somaiya College of Engineering, Mumbai, India - June 2015**

Secured a Bachelor of Engineering in Computer Engineering with *First Class Honors*

### SKILLS

**Programming Languages** - C++, C#, Blueprints, Lua, Assembly, GLSL  
**Software** - Visual Studio, Unreal Engine 4, Unity, OpenGL, Maya, MotionBuilder, Perforce, Git, Razor PS4 CPU/GPU profiler  
**Soft Skills** - Iteration, Collaboration, Creative Problem Solving

**Game Programming** - 3D Math, Data Structures, Skeletal Animation, Animation Programming, Blend Trees, Algorithms, Memory & Cache, Code Optimization & Architecture, Computer Graphics

### WORK EXPERIENCE

**SIE Santa Monica Studio, Los Angeles, USA - Gameplay Engineer Intern - C++, C#, Lua - Jul '19 to Sep '19**  
*Unannounced Game*

- ◆ Implemented a root-motion related animation tool feature to make viewing animations in game more convenient.
- ◆ Improved a combat collision system to perform more accurate shape intersection tests to better support designers' vision.
- ◆ Optimized a fact-checking system to keep certain types of fact buckets pre-sorted and sort other fact buckets only when necessary which saved 0.2 - 0.3 ms of frame time.
- ◆ Fixed bugs related to animation and combat systems.

**Actually A Game Company, Salt Lake City, USA - Gameplay & UI Engineer - C++, Blueprints, UE4 - Sep '18 to May '19**  
*Hard Light Vector - Released on Steam* Mar '19 - [Portfolio Page](#), [Project website](#)

An action-adventure FPS game with your fast-paced traversal techniques as tools to conquer giant mechanical monsters.

- ◆ Implemented an action-elements system to control VFX and screen effects for flair & feedback based on player state.
- ◆ Implemented & iterated on the player character's 'Thrusters' that give a small upward boost when you are in-air.
- ◆ Worked on an interaction system to indicate and handle interacting with interactable elements near the player.
- ◆ Implemented the HUD and various UI elements to achieve a sci-fi feel and power fantasy.
- ◆ Contributed to player-side design to create a unique character and resonating abilities that make you feel fast and fierce.

### GAME PROJECTS

**Movement & Traversal System - Gameplay & Animation Engineer - C++, UE4 - Sep '19 to Present - [Portfolio Page](#)**

A project focused on implementing modern movement & traversal techniques used in character-based games.

- ◆ Worked on delta correcting/motion-warping jumps to use a single animation for varying jump distances by extracting & manipulating root motion.

**Combo Attacks System Project - Gameplay & Animation Engineer - C++, UE4 - Aug '18 to Present - [Portfolio Page](#)**

- ◆ Created a gameplay and animation system for chain attacks/combos based on input timing, animation events & branches which is robust enough to allow adding any number of combat moves by designers and chaining between them.
- ◆ Improved responsiveness by accepting next attack input before an attack finishes and later executing the 'Pending Attack'.

**Graphics Project - Rendering & Graphics Engineer - C++, GLSL, OpenGL - Jan '19 to May '19 - [Portfolio Page](#)**

- ◆ Built a computer graphics rendering system using C++ & OpenGL with GLFW.
- ◆ Implemented techniques like Lighting, Blinn Shading, Textures, Render Buffers, Environment Mapping and Displacement and Normal Mapping.
- ◆ Worked on Tessellation to control rendering of objects with greater or lower detail based on performance requirements.
- ◆ Implemented Jorge Jimenez's Morphological Anti-Aliasing as a post-process anti-aliasing for the system.

### **Warlocks** - *Gameplay Engineer* - *C#, Unity* - Aug '18 to Dec '18 - [Portfolio Page](#)

A recreation of a MOBA-esque King-of-the-Hill PvP where you cast spells to fight and defeat other players.

- ◆ Created a controller system to switch input actions (select, move, target, cast) & handle character states for each action.
- ◆ Implemented movement status effects like Stun & Knock-back for spell interactions with characters.
- ◆ Implemented a well-rounded spell system with ability interactions & spell target types, levels, cast times & cooldowns.
- ◆ Created robust Unit Statistics, Damage and Status Effects systems and pipelines.
- ◆ Optimized spells' Game Object creation by instantiating into Object Pools before game start rather than during gameplay.
- ◆ Integrated network functionality for gameplay elements like movement, animation & spells for multiplayer mode.

### **2D Collision System** - *Gameplay Engineer* - *C++* - Feb '18 to May '18 - [Portfolio Page](#)

- ◆ Created the Collision & gameplay supporting systems for a 2D Game Engine and implemented Pong using it.
- ◆ Implemented the Swept Separating Axis Test for collision checks, and two types of responses to them - block & overlap.
- ◆ Optimized collision system by updating coordinate transformation matrices only for moveable objects, checking collision of only the ball with other objects & responding to only the earliest collision, capitalizing on the game world being sparse.
- ◆ Created libraries of 4x4 Matrix & Vector4 operations for transformations used primarily by collision system.

### **Memory Manager** - *Engine Core Engineer* - *C++* - Oct '17 to Dec '17 - [Portfolio Page](#)

- ◆ Created a memory manager in C++, with Fixed Size & Dynamic Size Allocators, that passes a robust unit test.
- ◆ Implemented Fixed Size Allocators for certain allocation sizes that use arrays of bits to track their memory blocks.
- ◆ Optimized bit operations with Compiler Intrinsic instructions to speed up looking through the bit-arrays.
- ◆ Created a Dynamic Size Heap Allocator to allocate memory of requested size from the reserved heap of memory.
