

SHANTANU SHRIPAD MANE - GAMEPLAY PROGRAMMER

 Phone No.: +91-8591079708
 | Email: shantanumane.com | linkedin.com/in/shantanusmane

EDUCATION

University of Utah, Salt Lake City, USA - May 2019

Secured a Master of Entertainment Arts & Engineering - Game Engineering Track with GPA 3.88/4.00

K.J. Somaiya College of Engineering, Mumbai, India - June 2015

Secured a Bachelor of Engineering in Computer Engineering with First Class Honors

SKILLS

Coding Languages - C++, Lua, C#, Blueprints, GLSL, Assembly **Software** - Visual Studio, Unreal Engine 4, Unity, OpenGL, Maya, MotionBuilder, Perforce, Git, Razor PS4 profiler, PIX profiler, Azure DevOps

Soft Skills - Iteration, Collaboration, Creative Problem Solving

Game Programming - Gameplay, 3D Math, Data Structures, Animation Programming, Animation Blend Trees, Algorithms, Memory & Cache, Code Optimization & Architecture, Computer Graphics

Game Design - Character, Controls, Combat, Game Feel

WORK EXPERIENCE

Sumo Digital, Pune, India - *Programmer - C++, C#, Unity* - Mar '21 to present *Undisclosed game*

- Fixed bugs related to character, levels and player input in menus.
- Maintained an asset compression tool with options for user experience.
- ♦ Porting efforts for Xbox One, Xbox Series X, PS5 and Switch parties, platform release requirements, subscription.
- ♦ Implemented Item Purchasing and DLC Store for Xbox.

343 Industries - Neal Analytics, Redmond, WA, USA - *Gameplay Software Engineer - C++, Lua -* Jan '20 to Sep '20 *Halo Infinite - Campaign Engineering team -* Released Dec '21

- Created a waypoints system to guide players through missions, allowing setup as building blocks and updating with objectives.
- Worked on campaign-related systems, on mission scripts to integrate systemic solutions, improvements to provide design tools and for content completion.
- Implemented a script system to detect player's engagement in combat to achieve desired mission flow.
- First Responder for Campaign team to investigate, find more information on and route reported bugs.
- Firefighting, workflow support and escalation to ensure productivity and issue resolution for designers & artists.

SIE Santa Monica Studio, Los Angeles, USA - Gameplay Engineer Intern - C++, C#, Lua - Jul '19 to Sep '19 God of War: Ragnarok

- ♦ Implemented a root-motion related animation tool feature to make viewing animations in game more convenient.
- Improved a combat collision system to perform more accurate shape intersection tests to better support designers' vision.
- Optimized a fact-checking system to keep certain types of fact buckets pre-sorted and sort other fact buckets only when necessary which saved 0.2 0.3 ms of frame time.
- Fixed bugs related to animation and combat systems.

Actually A Game Company, Salt Lake City, USA - Gameplay Engineer - C++, Blueprints, UE4 - Sep '18 to May '19 Hard Light Vector - Released on Steam Mar '19 - Portfolio Page

An action-adventure FPS game with your fast-paced traversal techniques as tools to conquer giant mechanical monsters.

- Implemented an action-elements system to control on-screen effects and VFX for flair & feedback based on player state.
- Implemented & iterated on the player character's 'Thrusters' that give a small upward boost when you are in-air.
- Worked on an interaction system to indicate and handle interacting with interactable elements near the player.
- Implemented & designed the HUD and various UI elements to achieve a sci-fi feel and power fantasy.
- ♦ Contributed to player-side design to create a unique character and resonating abilities that make you feel fast and fierce.

GAME PROJECTS

Combo Attacks System Project - Gameplay Programmer - C++, UE4 - Portfolio Page

- Created a gameplay and animation system for chain attacks/combos based on input timing, animation events & branches which is robust enough to allow adding any number of combat moves by designers and chaining between them.
- Improved responsiveness by accepting next attack input before an attack finishes and later executing the 'Pending Attack'.
- ♦ Worked on Input Buffering with a circular/ring buffer.
- ♦ Implemented attack variety determined by analog-stick direction pattern made by player along with input buffer.

Warlocks - Gameplay Programmer - C#, Unity - Portfolio Page

A recreation of a MOBA-esque King-of-the-Hill PvP where you cast spells to fight and defeat other players.

- Created a controller system to switch input actions (select, move, target, cast) & handle character states for each action.
- ♦ Implemented movement status effects like Stun & Knock-back for spell interactions with characters.
- ♦ Implemented a well-rounded spell system with ability interactions & spell target types, levels, cast times & cooldowns.
- Created robust Unit Statistics, Damage and Status Effects systems and pipelines.
- Optimized spells' Game Object creation by instantiating into Object Pools before game start rather than during gameplay.
- ♦ Integrated network functionality for gameplay elements like movement, animation & spells for multiplayer mode.

2D Collision System - *Gameplay Programmer - C++* - <u>Portfolio Page</u>

- ◆ Created the Collision & gameplay supporting systems for a 2D Game Engine and implemented Pong using it.
- ♦ Implemented the Swept Separating Axis Test for collision checks, and two types of responses to them block & overlap.
- Optimized collision system by updating coordinate transformation matrices only for moveable objects, checking collision of only the ball with other objects & responding to only the earliest collision, capitalizing on the game world being sparse.
- Created libraries of 4x4 Matrix & Vector4 operations for transformations used primarily by collision system.

Memory Manager - Engine Core Tech Programmer - C++ - Portfolio Page

- Created a memory manager in C++, with Fixed Size & Dynamic Size Allocators, that passes a robust unit test.
- ♦ Implemented Fixed Size Allocators for certain allocation sizes that use arrays of bits to track their memory blocks.
- Optimized bit operations with Compiler Intrinsic instructions to speed up looking through the bit-arrays.
- Created a Dynamic Size Heap Allocator to allocate memory of requested size from the reserved heap of memory.

Cherno Community Game Project - Animation Programmer - C++

• Designed and laid the foundation for the Skeletal Animation system.
