

# SHANTANU SHRIPAD MANE - GAMEPLAY PROGRAMMER

Phone No.: +1-385-202-9752| Email: <a href="mailto:shantanu.m934@gmail.com">shantanu.m934@gmail.com</a>Portfolio: <a href="mailto:shantanusmane">shantanusmane</a></a>| Iinkedin.com/in/shantanusmane</a>

## **EDUCATION**

University of Utah, Salt Lake City, USA - May 2019

Secured a Master of Entertainment Arts & Engineering - Game Engineering Track with GPA 3.88/4.00

K.J. Somaiya College of Engineering, Mumbai, India - June 2015

Secured a Bachelor of Engineering in Computer Engineering with First Class Honors

#### **SKILLS**

**Programming Languages** - C++, C#, Blueprints, Lua, GLSL **Software** - Visual Studio, Unreal Engine 4, Unity, OpenGL, Maya, MotionBuilder, Perforce, Git **Soft Skills** - Iteration, Collaboration, Creative Problem Solving

**Game Programming -** 3D Math, Data Structures, Animation Programming, Blend Trees, Algorithms, Memory & Cache, Code Optimization & Architecture, Computer Graphics

## **WORK EXPERIENCE**

SIE Santa Monica Studio, Los Angeles, USA - Gameplay Programmer Intern - C++, C#, Lua - Jul '19 to Sep '19 Unannounced Game

- Implemented a root-motion related animation tool feature to make viewing animations in game more convenient.
- ♦ Improved a combat collision system to perform more accurate shape intersection tests to better support designers' vision.
- Optimized a fact-checking system to keep certain types of fact buckets pre-sorted and sort other fact buckets only when necessary which saved 0.2 0.3 ms of frame time.

Actually A Game Company, Salt Lake City, USA - Gameplay Programmer - C++, Blueprints, UE4 - Sep '18 to May '19 Hard Light Vector - Released on Steam Mar '19 - Portfolio Page, Project website

An action-adventure FPS game with your fast-paced traversal techniques as tools to conquer giant mechanical monsters.

- ♦ Implemented an action-elements system to control VFX and screen effects for flair & feedback based on player state.
- ♦ Implemented & iterated on the player character's 'Thrusters' that give a small upward boost when you are in-air.
- Worked on an interaction system to indicate and handle interacting with interactable elements near the player.
- ♦ Implemented the HUD and various UI elements to achieve a sci-fi feel and power fantasy.
- ♦ Contributed to player-side design to create a unique character and resonating abilities that make you feel fast and fierce.

# **GAME PROJECTS**

Combo Attacks System Project - Gameplay Programmer - C++, UE4 - Aug '18 to Present - Portfolio Page

- Created a gameplay and animation system for chain attacks/combos based on input timing, animation events & branches which is robust enough to allow adding any number of combat moves by designers and chaining between them.
- Improved responsiveness by accepting next attack input before an attack finishes and later executing the 'Pending Attack'.

Warlocks - Gameplay Programmer - C#, Unity - Aug '18 to Dec '18 - Portfolio Page

A recreation of a MOBA-esque King-of-the-Hill PvP where you cast spells to fight and defeat other players.

- ♦ Created a controller system to switch input actions (select, move, target, cast) & handle character states for each action.
- ♦ Implemented movement status effects like Stun & Knock-back for spell interactions with characters.
- ♦ Implemented a well-rounded spell system with ability interactions & spell target types, levels, cast times & cooldowns.
- Created robust Unit Statistics, Damage and Status Effects systems and pipelines.
- Optimized spells' Game Object creation by instantiating into Object Pools before game start rather than during gameplay.
- ♦ Integrated network functionality for gameplay elements like movement, animation & spells for multiplayer mode.

2D Collision System - Gameplay Programmer - C++ - Feb '18 to May '18 - Portfolio Page

- Created the Collision & gameplay supporting systems for a 2D Game Engine and implemented Pong using it.
- Implemented the Swept Separating Axis Test for collision checks, and two types of responses to them block & overlap.
- Optimized collision system by updating coordinate transformation matrices only for moveable objects, checking collision of only the ball with other objects & responding to only the earliest collision, capitalizing on the game world being sparse.
- Created libraries of 4x4 Matrix & Vector4 operations for transformations used primarily by collision system.

**Memory Manager** - Engine Core Programmer - C++ - Oct '17 to Dec '17 - Portfolio Page

- Created a memory manager in C++, with Fixed Size & Dynamic Size Allocators, that passes a robust unit test.
- Implemented Fixed Size Allocators for certain allocation sizes that use arrays of bits to track their memory blocks.
- Optimized bit operations with Compiler Intrinsic instructions to speed up looking through the bit-arrays.
- Created a Dynamic Size Heap Allocator to allocate memory of requested size from the reserved heap of memory.
